# With SMACS solutions from FASTCOM, IT.NRW secures the flow of people and material into the data center and IT areas.

- **IT.NRW secures the security-relevant access points with SMACS.**

- **SMACS solutions enable simultaneously both security and flexibility.**

- **People flows and material flows are automatically secured by SMACS solutions of FASTCOM and thus meet the highest security standards.**

**Lausanne, Switzerland – 19 December 2023**

*FASTCOM Technology SA secures security-relevant access points at IT.NRW. SMACS FlexMat secures the flow of people and materials. The solution meets the high security requirements, but also allows for flexible use.*

**The customer:** IT.NRW develops and operates the IT infrastructure for the North Rhine-Westphalian state administration. It also advises state authorities and offers IT training for members of the public administration. At the same time and in addition to other tasks, IT.NRW also act as the state statistical office for the state of NRW.

**The challenge:** The security concept meets the highest standards. All flows of people and materials into the IT areas must be secured. Access must be fast and convenient for authorized employees, but forbidden to unauthorized persons. Material transports must be possible both separately and in combination with simultaneous personnel access.

**The solution:** SMACS FlexMat is implemented to optimally secure the flow of people and materials. People and material flows can be integrated into the existing infrastructure in two- or more doors mantraps, without major construction work. SMACS can be implemented into almost any mantrap size and layout, while complying with major organizational requirements. Special modes (cleaning mode, VIP mode, emergency exit mode, etc.) are available.

*"The permanent security of access points (24/7) against unauthorized entry is an important and sensitive aspect of our access management. The SMACS solutions are able to comply with the security requirements for people and combined people/material flows, while integrating seamlessly into the existing infrastructure."*

**Nico Hamacher, Information and Technology, IT.NRW**

**About FASTCOM**

FASTCOM is a leading company in providing multi-flow airlock solutions. Based in Switzerland, FASTCOM is an independent company and is active worldwide for more than 25 years. For more information, please visit: https://www.fastcom-technology.com/fastcom
