

smacs flex

The high-security solution for flexible anti-tailgating

How to be sure, with high security, that an unauthorized user does not gain access by following an authorized user?

SMACS flex is the reliable solution for high security and flexible anti-tailgating. Designed to seamlessly integrate into your infrastructure, it maintains high levels of security and prevents tailgating. SMACS flex ensures that your security processes are followed correctly at every transit and that they are adapted to your business requirements.

SMACS flex

The high-security solution for flexible anti-tailgating

SMACS flex is the high security and flexible solution against tailgating. Typical applications include securing the access to data centers, restricted VIP zones, secure production zones, R&D centers, command&control rooms or vaults.

Part of the SMACS product line, SMACS flex is the reliable solution for automatic, highly secure and flexible anti-tailgating in a multi door environment. It is suited to a wide range of applications and can be easily retrofitted into the existing infrastructure.

SMACS flex provides high security protection against tailgating whilst allowing for flexible security processes to meet the individual needs of your business. For example, in parallel to high security anti-

tailgating, SMACS flex can manage the flow of material such as hand-luggage or allow for asymmetrical access procedures such as "single entry"/"free exit". SMACS flex uses information on the user profile (i.e. UP functionality) to ensure better comfort and enhanced security.

SMACS flex is a Swiss-made solution that can either be a standalone system or can seamlessly integrate with any existing access control system.

SMACS products are reliable and have high performances

- Fully automatic and intelligent anti-tailgating, whilst allowing for user comfort
- Patented and Swiss made
- No mechanical elements to impede people movement
- Reduced Total Cost of Ownership (TCO)
- Integrable with any type of access control system and any door control
- Used by many Fortune Global 500 companies around the world
- Compatible with the security standards in many industries

SMACS products are flexible and adapt to your business needs

- Flexible security processes that meet your specific needs
- Audio/visual guidance for user comfort
- Retrofit is possible as it adapts to existing infrastructure
- Transformation of any room/corridor into a secured unmanned airlock
- Adaptation to very different environments (including stairways)
- Possibility of wide airlocks with very different shapes
- Minimal impact on architectural aesthetics
- Easy to uninstall and reposition in case of change to the infrastructure
- Many product and service options available

Specific features of the product
