

**FASTCOM Technology SA presents its MCAS solution at IBC 2016, stand 5.C35, 9<sup>th</sup> to 13<sup>th</sup> September 2016**

- The [MCAS](#) avoids security vendor lock-in for pay-TV operators.
- The MCAS allows for multiple CAS/DRM to operate on the same STB.
- MCAS builds on industry standards such as [ETSI TS 103 162 \(K-LAD 2010\)](#), [SSL](#), [TLS](#) and [PKCS](#).

**LAUSANNE, Switzerland - August 22<sup>nd</sup>, 2016**

[FASTCOM Technology SA](#), a leading company in licensing authority services for connected devices, presents its [MCAS solution](#) at IBC 2016, stand 5.C35, 9<sup>th</sup> to 13<sup>th</sup> September 2016.

[MCAS](#) is a complete solution of Licensing Authority Services (LAS) for connected devices. A licensing authority provides the services and the related infrastructure to produce, provision, host, update and revoke licenses and certificates. These licenses and certificates are used to secure the communication with the connected devices deployed in the field.

MCAS can manage multiple security assets throughout their respective lifecycles and is based on industry standards. Typical connected devices are set-top boxes (STBs). Thanks to MCAS, the operator keeps the direct control over the STBs deployed in the field, while preserving the security level of leading solutions (e.g. CAS, DRM, SSL). MCAS empowers the operator to freely choose the applications, the middleware and the security solutions for its STBs. If required, a multi-vendor approach is also possible. Updates and changes are possible at any time for a minimum cost, even when the STBs are deployed in the field.

*“Thanks to FASTCOM’s [MCAS](#) solution and its independence towards the security vendors, FOXTEL is able to achieve its goal of total control over the deployed iQ3 set-top-boxes while leveraging two proprietary CAS solutions running in parallel on the iQ3.”*

**Mr. Stephen Joyce, Senior Platform Security Lead, [FOXTEL](#)**

As a company, [FASTCOM](#) is fully independent from any vendor. Furthermore, all data encompassed in the MCAS are subject to the Swiss laws, which provides an additional protection for our clients.

**About FASTCOM**

[FASTCOM](#) is a Swiss-based company leading in standard-based solutions for the payTV security market, such as licensing authority services and consulting services. FASTCOM is independent and neutral towards any security, STB and chipset vendor. FASTCOM has expertise in security standards such as [SCTE 201 2013](#) and [ETSI TS 103 162 \(K-LAD 2010\)](#). For more information, please visit [www.mcas.ch](http://www.mcas.ch).
